

## Assembly Instructions

## Window Sign Display - WDS Series

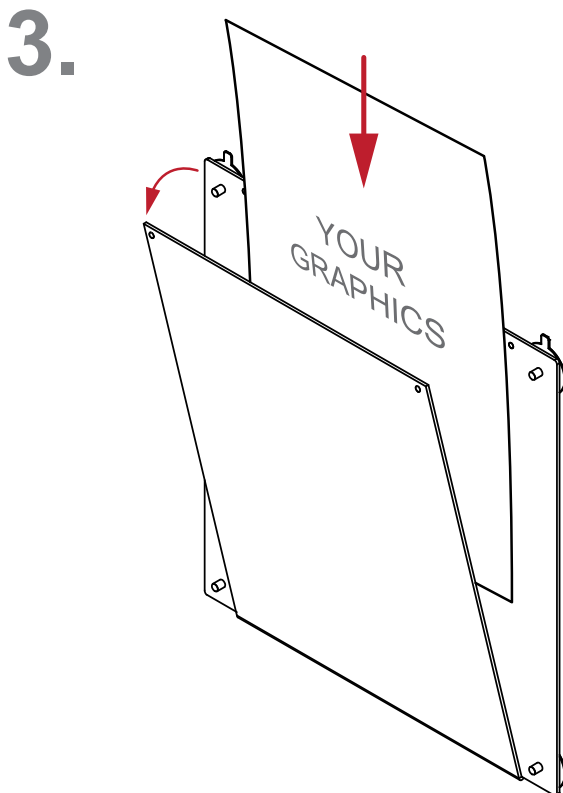

### 1. Moisten Suction Cups

Place the window poster holder against any **Glass, Tiles or any Non-Porous Surface.**

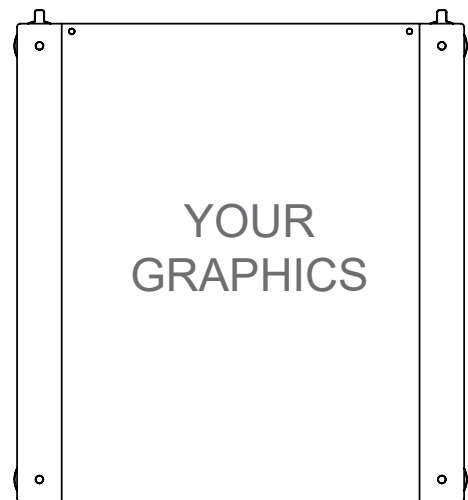

### 2. Press down firmly on the Suction cups.

Pull acrylic and place your graphics.

### 4. Window Display Ready in Seconds.

**We recommend re-moistening suction cups regularly to maintain adhesive strength.\***

\*Window suction cups are designed to be lubricated prior to installation to gain full adhesion to glass and non porous surfaces. Failure to lightly lubricate individual suction cups could result in an improper installation resulting in holders sliding and or falling. The length of time which a suction cup effect can be maintained will depend on different applications and environments of installation. The easiest way to prevent improper installations is to do regular checks on the adhesion and repeat holder installation process when required.
